Juan Manuel Espinoza Nevarez

Software Engineer | Enterprise Architect | Technical Lead

juanmespinoza@gmail.com | WhatsApp +52 8110 416872 | LinkedIn | GitHub

Systems engineer with nearly two decades of taking software from architecture to production: from Java/PHP development and enterprise architecture (TOGAF) at large corporations such as FEMSA, to managing L4 support and the critical foreign-trade applications that keep more than 70 companies running. Today I add AI-assisted engineering to build complete products — multi-tenant SaaS, native apps and self-hosted infrastructure — with tests, documentation and end-to-end verification.

19+	70+	50	L4
Years of experience	Companies supported	People led (maximum)	Technical support level

Professional journey

Jan 2025 – Present

Foreign Trade Applications Support Supervisor

American Industries

Supervision and management of critical foreign trade applications, ensuring operational continuity for 70 companies under the shelter scheme.

- Led the management and supervision of commercial and customs information systems, ensuring operational continuity for more than 70 companies.
- Managed and optimized the development project for the TCS platform, focused on foreign trade.
- Oversaw the use and support of key tools such as GitLab, Docker, and the technology platform based on Ruby on Rails, Angular and PostgreSQL.
- Ensured the correct operation of critical applications for customs processes, including the management of Annex 24 ZOE.
- Developed and supervised strategies to improve user-support efficiency and incident resolution.

May 2023 – Apr 2024

Software Engineering Manager / Business Consulting IV

DXC Technology

Software engineering management, Agile process optimization, and ensuring the reliability of complex systems.

- Managed a software engineering team, leading projects and ensuring business objectives were met.
- Implemented Agile methodologies to optimize development processes, improving team efficiency and collaboration.
- Resolved complex technical issues in real time (SQL, Java, JavaScript, HTML5), minimizing application downtime.
- Worked closely with stakeholders to define project scope, requirements and deliverables, ensuring alignment with company goals.
- Analyzed system performance and applied fixes to ensure the reliability, performance and scalability of solutions.

Oct 2019 – Jan 2023

PHP Developer / Triage Engineer

Concentrix Catalyst (assigned to Honeywell / T-Mobile)

Combined development and support, ensuring the uptime of critical systems through proactive monitoring.

- Responsible for proactive monitoring and analysis of incidents to ensure system control and reliability.
- Used monitoring tools such as Splunk, AppDynamics, Grafana and Azure to identify and resolve issues in real time.
- Built PHP middleware integration between BigCommerce and Visual ERP.
- Provided ServiceNow support, resolving high-priority tickets and escalating issues to development teams.
- Developed and maintained Java 8 applications with Spring and Spring Boot, optimizing their performance and functionality.

Nov 2018 – Sep 2019

Sr. Developer

Dresden Partners (assigned to HCL / Nokia)

Development of tools and workflows in a proprietary Nokia system.

Nov 2015 – Nov 2018

Enterprise Architect / Lead Enterprise Architect

Softnet Soluciones (assigned to FEMSA Comercio)

High-level strategic role defining and controlling architecture standards for a large corporation.

- Led the definition and control of architecture standards for FEMSA Comercio.
- Used industry-leading frameworks such as TOGAF, ArchiMate 2.0 and Enterprise Architect to guide design and implementation.
- Managed the enterprise architecture project, ensuring alignment between technology strategy and business objectives.
- Implemented systems for KPI generation and tracking, enabling objective measurement of architecture progress and impact.
- Supervised a team of up to 50 collaborators, fostering collaboration and adherence to architecture standards.

Apr 2013 – Nov 2015

Java / PHP Developer

Softnet Soluciones (assigned to Qualitypost)

Maintenance of the NPOS application and development of national logistics solutions.

Oct 2010 – Apr 2013

Java Developer Lead

Grupo Empresarial EISEI

A fundamental step toward leadership, managing teams for clients such as OXXO and FAMSA.

Oct 2009 – Feb 2010

Web Developer

Exosfera.com

Web development experience with PHP and MySQL, focused on layout and maintenance.

Jul 2007 – Oct 2009

Java Developer

UACH

Development of internal web applications and administration of PostgreSQL databases.

Projects

Complete products I designed, built and operate. I work with AI-assisted engineering: I define the architecture, specifications and verification criteria; agents implement, and I review and validate with tests and real evidence.

MUSA

Multi-tenant SaaS · 2026

Platform to digitize a sublimation print shop: inventory, catalogs, quotes, production orders and deliveries, with per-customer data isolation.

- Layered architecture: React 19 + TypeScript SPA, FastAPI backend and self-hosted Supabase (PostgreSQL with row-level security and JWT authentication).
- More than 100 automated tests, 7 documented architecture decisions (ADRs) and backups with a proven restore.

React 19 · TypeScript · FastAPI · PostgreSQL · Supabase · Docker · GitHub Actions

Medusa ERP

SaaS ERP for SMBs · 2025–2026

Cloud ERP for micro-businesses in personalization and light manufacturing: sales, purchasing, quotes, finance, invoicing and reporting in a single source of truth.

React · TypeScript · Supabase · PostgreSQL · Stripe · Playwright · Tailwind

LLM Dev Framework

MIT-licensed framework · 2026

Reusable method to build and maintain software with AI agents as technical collaborators, distilled from three real systems.

View code on GitHub — https://github.com/Nashova/LLM-Dev-Framework

PowerShell · Bash · Markdown · Agent Skills

Nasheim

Native desktop and Android app · 2026

Personal administration app that reads and writes an Obsidian vault on OneDrive directly and surfaces to-dos, statuses and reminders with real notifications.

Rust · Tauri · SQLite · Microsoft Graph · Android · GitHub Actions

Fontaine

Windows desktop app · 2026

Font manager with synchronization between computers on the local network and an agent that suggests similar fonts from an image.

Python · FastAPI · SQLite · fonttools · mDNS · Ollama

Sublimation online store

E-commerce · 2025–2026

Store for sublimated and personalized products with catalog, comparison, wishlist, online payment and an admin panel.

React · TypeScript · Supabase · Stripe · SEO

Homelab & local AI

Own infrastructure · 2026

A home lab that I run like production: self-hosted services, secure access from the internet and AI models running locally.

Debian · Docker · Tailscale · Cloudflare Tunnel · Caddy · Ollama · Open WebUI

The code for most of these projects is private (LLM Dev Framework is public); demos and code reviews are available on request.

Technical skills

Languages & frameworks: Java EE (Spring Boot) · JavaScript / TypeScript (React, Node) · PHP · HTML/CSS · SQL/PL-SQL · Python (FastAPI) · Ruby on Rails · Angular · Rust

Databases: Oracle DB · MariaDB/MySQL · PostgreSQL · SQL Server · DB2

Tools & methodologies: Architecture (TOGAF) · CI/CD (GitHub Actions, Jenkins, Git) · Monitoring (Splunk) · Agile (Scrum/Kanban) · Cloud (Azure) · GitLab · Docker & Linux · AI-assisted engineering

Education & languages

Education

Bachelor's in Computer Systems Engineering (Software specialization)
Universidad Autónoma de Chihuahua (UACH)
2001 – 2007

Languages

Spanish
Native

English
Advanced (C1) · 80% spoken and written
